

Fertility Preservation Uninsured and Out Of Pocket Costs

Quotes from Generation Fertility: <https://www.generationfertility.ca/>

For cryo not covered by the OFP the costs are:

- Oocyte Freezing Cycle - \$7250
- Medication for egg freezing - we typically quote between \$5-7k, it varies based on the person and which meds are ordered etc. so it is hard to give an accurate cost.
 - Younger patients typically are on the lower end of that range.
 - Generation Fertility also has the ability to request compassionate meds from some of our suppliers for patients who are in a very low socioeconomic bracket.
- Initial Sperm Freezing - \$350
- Additional Sperm Freezing - \$200
- Annual Storage - \$500

Some diagnostic tests that may be ordered are not covered by OHIP too; These tend to be more optional so if patients want to they can opt out if cost is a factor.

- Sperm DNA Fragmentation - \$250
- AMH (for egg reserve) - \$125 (very highly recommended)
- Vitamin D - \$55 (may be covered by OHIP with clinician's requisition)
- Violet AI Assessment (for egg quality at retrieval) - \$450

Additional Notes

All of these are subject to change.

These fees are out-of-pocket medical expenses so it can be submitted on an annual tax return.

If patients have workplace benefits, more and more plans are offering fertility coverage (usually for medications) - please contact your provider directly to inquire!
